

TREATMENT PRIORITY

MODERATE

Based on your observations. This screening heuristic does not predict collision probability.

GLASS DIMENSIONS	SELECTED DESIGN
36 x 24 in	Dots
MAXIMUM INTERVAL	APPROXIMATE LAYOUT
2 inches	19 columns x 13 rows (247 marks)

0.375 in dot diameter. Light treatment. Use opaque material with strong contrast, visible from 10 feet. Preview opacity is only a simulation.

What your answers show

Vegetation reflected in glass; Some nearby vegetation; Bird activity uncertain; Occasional night lighting; No exterior treatment.

Your next steps

- 1. Apply the visible treatment to the exterior surface, following the product instructions.
- 2. Keep horizontal and vertical gaps at 2 inches or less.
- 3. Check periodically for missing or damaged markings.
- 4. Reduce unnecessary nighttime lighting near the window where practical.

Counts are conservative edge-to-edge estimates. Measure each pane separately and follow the chosen product's installation instructions. Decorative motifs are not tested or certified products.
